Woodstock Garden Bells®
WGBLG3

Please read!

Your Woodstock Garden Bells are an attractive home or garden accessory with a unique sculptural appeal. To enhance the experience of your Woodstock Garden Bells, please try the following suggestions:

- Be sure that the GardenStone™ is on level ground, in an elevated and unobstructed location which will yield the most air movement.

- Check to see if any of the wires are hanging lower than the others. If necessary, remove the entire stalk of wires from the stone base, rotate the stalk 180 degrees and re-insert it into the base. All of the bells should face upward.

- If the bells are leaning to one side, place your hand at the base of the stalk of wires and gently bend them in the desired direction.

- For the best chance of sound, the bells should be close together, yet not touching. You may adjust the individual stems by gently pulling each bell to the opposite direction, almost to the ground. (This will bow the wire stem - please be careful not to crimp the wire.) Allow the bell to pop back upward on its own. Once you have done this to each of the stems, you will find the bells will be positioned closer together.

- The small coiled wires at the bottom of the stalks are ornamental. These coils should not be wrapped around the stems, as they will interfere with the movement of the bells.

Your Woodstock Garden Bells come with brass “leaves” attached to three of the stems. They are designed to catch the wind, to encourage movement of the bells when the wind blows. These leaves SHOULD NOT be removed. For optimal performance, they are positioned at the top of the stem, just below the bell, during the assembly process (Fig. 1).

We do not recommend adjusting the brass leaves. However, if by chance they have moved during shipment, you may want to reposition them. Please do so very carefully! Their edges may be sharp and “over-adjusting” may elongate the holes, causing the leaves to slip on their stems. To move up or down, DO NOT force the leaf. Gently squeeze the leaf’s upper and lower ends toward each other until you can slide the leaf easily (Fig. 2). Remember, it will be most effective closest to the bell. Leaves can also be rotated on the stem to catch the wind from different directions. Once you have adjusted the leaves, they should not require further adjustment and are best left alone.

Caution:
Woodstock Garden Bell leaves may have sharp edges. Do not allow children to play with them.
